

User Class:

```
src > J User.java > ...
1  public class User {
2      private String userName;
3      private String email;
4
5      public User(String userName, String email) {
6          this.userName = userName;
7          this.email = email;
8      }
9
10     public String getUserName() {
11         return userName;
12     }
13
14     public String getEmail() {
15         return email;
16     }
17 }
18
```

- **Stores a user's name and email.**
- The **constructor** sets those values when a User object is created.
- `getUserName()` returns the user's name.
- `getEmail()` returns the email.
